Sharing the Road with Snowplows

Don't go out during a snowstorm if you can avoid it. If you do, buckle up – always.

If you must go out, here are some tips to share the road with snowplows:

- Give snowplows room to work; don't tailgate or try to pass
- Stay at least four car lengths back from snowplows and equipment.
- Plowed snow can create a cloud that can blind drivers following too close.
- Spreaders on trucks can throw salt, sand or cinders that can damage close-following vehicles.
- Plow truck operators have to focus on snow removal and cannot always watch out for the drivers surrounding them, which means they may not see you if you try to pass or even collide with Pettis County equipment.
- Drive even more slowly in construction zones, even though they are inactive in winter weather.
- Always have your headlights on, plenty of fuel and wiper fluid and tires with ample tread.

Remember that a snowplow operator's field of vision is restricted. You may see them, but they may not see you.

Pettis County Road and Bridge understands that each road is a priority to drivers; however, there are not enough workers or trucks to clear all roads immediately. In order to do the most efficient job that will impact the most drivers, we have established a plowing order, setting priorities for which roads are cleared first. The following lists are in alphabetical order by sections, not plowing order.

During winter weather events, the Road and Bridge Department will utilize the above listing of priority-cleared roads. We ask that any vehicle, trailer, or farm implement be removed from the roadway to provide clearance for our trucks. We understand that sometimes travel is necessary during these events. Please give our snowplows room to work in a safe and efficient manner.
